

EU funding information

JSC "Intersurgical" successfully implemented a 13,571 million LTL value project, which upgraded technical production processes of the company. The project was initiated in 2008, with the objective to increase company's productivity, efficiency and to maintain its international competitiveness.

During the project, two product technology lines were upgraded:
i-gel supraglottic airway and reservoir bags.

Production line upgrades have given positive results:

- Increased production efficiency and capacity (as well as exports);
- Improved quality standards of production;
- Decreased defect rate;
- Decreased downtime due to problems in the production process;
- Automated manual work processes;
- Increased company's eco-friendliness (new equipment is more environmentally friendly);
- Improved work conditions.

The project was implemented in 3 years (from 2008/11 to 2011/11) with financial support from the European Union structural support fund 2007-2013, under the Economic Growth Action Programme's priority's „Increasing Business Productivity and Improving Environment for Business“ measure „Leader LT“. 4,7 million LTL in support were provided by The European Regional Development Fund (ERDF) and Republic of Lithuania budget to implement the project.
