Intersurgical AquaFlow®

Bubble humidifier range

Quality, innovation and choice

Intersurgical AquaFlow®

Humidity is essential to a healthy respiratory tract. The Intersurgical AquaFlow uses the bubble-through humidification process to bring dry oxygen gas to ambient levels of humidity. The dry gas from the flowmeter is directed into the water bottle where it is broken up into small bubbles which gain humidity as they rise to the surface of the water.

The Intersurgical AquaFlow (green) range is compatible with Baxter sterile water bottles and are also available with either a 120ml or 500ml bottle which can be filled with sterile water if required. Homecare versions (grey) are also available with a 120ml bottle. The small size ensures that they will fit the majority of oxygen concentrators.
